Giant Gastric Gastrointestinal Stromal Tumor (GIST).

Andrés Navarrete, Dulce Momblán, Raúl Almenara y Antonio Lacy.

Abstract

Gastrointestinal stromal tumors (GIST) represent 0.1–3 % of gastrointestinal malignancy. Surgery is the mainstay of treatment, but in high-risk tumors, imatinib can help to achieve better oncological outcomes. We present a rare case of a patient with gastric GIST with very aggressive evolution in a short period of time despite the use of neoadjuvant therapy with imatinib.
